MEHAK SAINI

Newark, NY | +1 (419) 565-9221 | **mehaksaini347@gmail.com** | GitHub | Portfolio

PROFESSIONAL SUMMARY

Business Operations and Analytics professional with experience across wireless retail, manufacturing, supply chain, procurement, inventory, and order management domains. Skilled in Power BI, Excel, SQL, Power Query, Tableau, R Studio, and SAS Studio for KPI reporting, dashboard development, forecasting, variance analysis, data validation, and process improvement. Strong background in requirements gathering, BRD/FRD documentation, UAT coordination, stakeholder collaboration, root cause analysis, and executive reporting to support data-driven business decisions across complex operations and retail environments efficiently.

TECHNICAL SKILLS

Analytics & Reporting: Power BI, Advanced Excel, Pivot Tables, Power Query, Tableau, KPI Dashboards, Executive Reporting, Sales Performance Reporting, Forecasting, Variance Analysis
Database & Data Validation: SQL, Data Validation, Data Reconciliation, Data Quality Checks, Data Mapping, Data Extraction
Business Analysis: Requirements Gathering, BRD, FRD, User Stories, Process Flows, AS-IS and TO-BE Mapping, Fit-Gap Analysis, Acceptance Criteria, Stakeholder Management
Domain Knowledge: Retail Operations, Sales Operations, Supply Chain, Procurement, Inventory Management, Order Management, Warehousing, Demand Planning
Testing & Tools: JIRA, UAT, SIT, Regression Testing, Smoke Testing, Defect Tracking, Go-Live Support, Hypercare Support

PROFESSIONAL EXPERIENCE

Business Operations Lead
Digicell UPNY Inc. / Digitalk Wireless | Newark, NY | February 2026 – Present

- Analyzed multi-store wireless retail performance using Power BI, Excel, Pivot Tables, Power Query, and SQL, tracking revenue, activations, transactions, accessories, add-ons, targets, and product mix to improve sales visibility for regional leaders.
- Developed and validated KPI dashboards, Excel reports, SQL checks, and Power Query workflows, improving reporting accuracy by 25% across activation, revenue, transaction, product, representative, and store-level performance data for executive reporting.
- Forecasted month-end wireless sales using Excel, Power BI, and SQL by analyzing MTD performance, run rate, seasonality, promotions, product mix, and remaining selling days, improving forecast accuracy by 15% for planning decisions.
- Performed variance analysis against budget, forecast, sales targets, prior periods, and regional goals, identifying revenue, activations, transactions, accessory attachment, add-on sales, margin, and product mix drivers for underperforming retail locations.
- Partnered with finance, sales operations, store managers, regional leaders, and BI developers to reconcile revenue, cost, margin, targets, cancellations, returns, mappings, and product categories, reducing reporting discrepancies by 20% within monthly cycles.
- Evaluated gross revenue, adjusted revenue, cost, margin percentage, and profitability by store and product category using Excel and Power BI, improving revenue-versus-profit visibility by 20% for retail leadership reviews and decisions.
- Identified at-risk stores through root cause analysis of weak activations, low accessory attachment, inventory shortages, staffing gaps, productivity issues, data mismatches, and revenue gaps, supporting 10% category opportunity recovery through corrective actions.

Business Analyst
Tata Consultancy Services (TCS) | India | January 2021 – July 2023

- Gathered, analyzed, and documented business requirements across manufacturing, supply chain, procurement, inventory, order management, warehousing, and service-parts operations, creating BRDs, FRDs, user stories, process flows, and functional documentation.
- Collaborated with business users, data teams, QA teams, and technical stakeholders to translate operational needs into reporting specifications, dashboard requirements, validation rules, acceptance criteria, and testable user stories.
- Mapped AS-IS and TO-BE processes across procurement, production planning, demand planning, replenishment, order fulfillment, inventory tracking, and warehouse operations to improve process visibility and stakeholder alignment.
- Performed fit-gap analysis between existing workflows and SAP ERP-enabled target processes, identifying gaps related to reporting, data quality, process controls, integrations, migration readiness, training, and user adoption.
- Used SQL, Excel, Power BI, Tableau, R, and SAS Studio to support data validation, reporting analysis, dashboard development, trend analysis, and business insights for inventory, demand, backorders, fulfillment, and warehouse performance.
- Created dashboards, reports, data extracts, field mapping documents, KPI definitions, and reporting requirements to help business users monitor stock visibility, demand trends, order status, replenishment needs, and fulfillment performance.
- Coordinated SIT, regression testing, UAT, smoke testing, training, go-live, and hypercare activities using JIRA, UAT trackers, and ticketing tools, helping triage defects, data mismatches, reporting issues, and user validation concerns.

EDUCATION

Masters in Management Science | August 2023 – December 2025 | GPA 3.79 / 4.0
Ashland University, Dauch College of Business | USA
Bachelor's Degree in Business Administration | September 2019 – July 2022
Shri Atmanand Jain Institute of Management & Technology | India

PROJECTS

ACG Cleveland Cup — Case Competition, Ashland University — 2026

- Built integrated financial models, forecasts, and scenario analyses under a competitive deadline to support business recommendations.
- Presented and defended recommendations to a senior executive panel, demonstrating financial analysis, business communication, and decision-making under pressure.

Multi-Location Performance & Budget Dashboard — Power BI, DAX

- Consolidated fragmented performance data from 7 locations into a single Power BI dashboard, creating a single source of truth for tracking targets, achievement, margins, and variances.
- Tracked 462 targets versus 409 achieved, showing 88.5% attainment and a 53-unit gap, with product-level and location-level views to support performance and budget analysis.

RetailIQ — SQL Analytics Database — PostgreSQL

- Designed a normalized PostgreSQL analytics database covering 8 sales representatives, 6 locations, 4 plans, 900 customers, and approximately 5,100 transactions.
- Built analytical SQL queries using CTEs and window functions to evaluate sales performance, customer activity, and operational trends, while applying data-quality validation checks.

E-Commerce Analytics Pipeline — Python, Tableau

- Developed an end-to-end analytics pipeline using Python to clean, transform, and deduplicate 5,200 e-commerce transactions across 6 sales channels.
- Built a Tableau dashboard to visualize channel performance, transaction trends, and key business metrics for faster analysis and reporting.
