PROFESSIONAL SUMMARY

FP&A-certified analyst with 3+ years across planning, operations and business analysis. Owns the full cycle for a seven-location business — annual budget, monthly forecast, variance analysis, and the revenue-to-profit reporting leadership decides from — and builds the models, dashboards and SQL behind it. Earlier consulting work at a multinational firm covered requirements, process design and reporting for supply chain, procurement and inventory programs. STEM-designated Master's in Management Science.

CORE COMPETENCIES

Planning & Analysis: Annual Budgeting · Monthly Forecasting · Variance and Driver Analysis · Financial and Scenario Modeling · Revenue, Cost and Margin Analysis · P&L Reporting · KPI Design · Executive Reporting

Analytics & Programming: SQL (CTEs, Window Functions) · Advanced Excel · Pivot Tables · Power Query · Power BI (DAX) · Tableau · Python (pandas, scikit-learn) · R · SAS Studio · Data Validation and Reconciliation

Business & Process: Requirements Gathering · BRD / FRD · Process Flows · AS-IS and TO-BE Mapping · UAT and Regression Testing · JIRA · Root Cause Analysis · Process Improvement · Cross-Functional Partnering

PROFESSIONAL EXPERIENCE

Business Operations Lead
Digicell UPNY Inc. / Digitalk Wireless | Newark, NY | February 2026 – Present

- Own the monthly P&L view across seven locations and four product lines — gross revenue, adjusted revenue, cost, margin percentage and profitability by location and category — improving revenue-versus-profit visibility by 20%.
- Build month-end forecasts in Excel, Power BI and SQL from run rate, seasonality, promotions, product mix and remaining selling days, improving forecast accuracy by 15%.
- Run variance analysis against budget, forecast, targets, prior periods and regional goals, isolating the revenue, transaction, margin and product-mix drivers behind each movement.
- Build and validate KPI dashboards, financial models, SQL checks and Power Query workflows, improving reporting accuracy by 25% and removing manual steps from the monthly cycle.
- Partner with finance, operations, store leadership and BI developers to reconcile revenue, cost, margin, targets and category mappings, cutting reporting discrepancies by 20% per cycle.
- Turn analysis into recommendations for underperforming locations — soft categories, inventory shortages, staffing and productivity gaps — supporting 10% category opportunity recovery.

Business Analyst
Tata Consultancy Services (TCS) | India | January 2021 – July 2023

- Gathered and documented business requirements for global clients across manufacturing, supply chain, procurement, inventory and order management, producing BRDs, FRDs, user stories and acceptance criteria.
- Mapped AS-IS and TO-BE processes across production planning, demand planning, procurement, replenishment and warehouse operations, and ran fit-gap analysis against SAP S/4HANA target processes.
- Built reporting and data extracts in SQL, Excel, Power BI, Tableau, R and SAS Studio covering stock visibility, demand trends, order status, backorders and fulfillment performance.
- Coordinated SIT, UAT and regression testing in JIRA, triaging defects and data mismatches, then supported end-user training, go-live and hypercare on each rollout.

PROJECTS

- **Multi-Location Performance & Budget Dashboard (Power BI, DAX) —** consolidated 7 locations into one dashboard tracking 462 targets vs. 409 achieved (88.5% attainment) and a 53-unit gap-to-target, with product- and location-level views.
- **RetailIQ — SQL Analytics Database (PostgreSQL) —** normalized analytics database across 6 locations, 8 reps, 4 plans and 900 customers; ~5,100 transactions analyzed with CTEs, window functions and data-quality validation checks.
- **ACG Cleveland Cup Case Competition (Ashland University, 2026) —** built integrated financial models — income statement, balance sheet, cash flow — with forecasts and scenario analysis, then presented and defended the recommendation to a senior executive panel.
